

## ASX/MEDIA RELEASE

25 January 2008

### NEW WEBSITE FOR ROX

---

Rox Resources (ASX: RXL, "Rox") is pleased to announce the launch today of its new website at [www.roxresources.com.au](http://www.roxresources.com.au).

Rox recently announced the acquisition of the Reward project in the Northern Territory from Rio Tinto subsidiary North Mining. Drill results at the Myrtle prospect include **21 metres** grading **5.2% Zn** and **1.4% Pb** from 216 metres depth.

This project complements Rox's two other projects at Pha Luang in Laos, and Lennard Shelf in Western Australia.

With the announcement of the Reward project, Rox has successfully completed its transformation to a multi-asset, geographically diversified explorer with ground floor entry into three globally significant zinc-lead provinces.

Information about these projects and all of Rox's activities can be accessed on the new website.

*The information in this report that relates to Exploration Results and Mineral Resources is based on information compiled by Mr Ian Mulholland BSc (Hons), MSc, FAusIMM, FAIG, FSEG, who is a Fellow of The Australasian Institute of Mining and Metallurgy and a Fellow of the Australian Institute of Geoscientists. Mr Mulholland has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration, and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Mulholland is a full time employee of the Company and consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.*

## About Rox Resources

Rox Resources (ASX: RXL) is an emerging Australian exploration company focussing on zinc-lead deposits, particularly deposits of the Mississippi Valley Type (MVT) and Sedimentary Exhalative Type (SEDEX). MVT and SEDEX zinc-lead deposits are known across the world and usually occur in “districts”, providing some 85% of the world’s zinc-lead resources. Notable MVT districts and/or deposits include the Lennard Shelf and Admiral Bay in NW Australia, Navan (Ireland), Mehdiabad (Iran), Reocin (Spain), Fankou (China) and the Mississippi Valley area of the USA. Notable SEDEX districts include the Mount Isa and McArthur Basins in northern Australia, Sullivan and Howard’s Pass (Canada), Red Dog (USA), Rampura Agucha (India) and Aguilar (Argentina).

Rox owns a 60% interest in the **Pha Luang** zinc-lead sulphide project in Laos which it believes has the potential to become a large new zinc-lead district. The project area covers a 20km<sup>2</sup> mining concession area and contains more than 20 MVT zinc-lead prospects. Rox is the first explorer to apply modern techniques to the area. Mineralisation is widespread with zinc oxides and lead sulphides outcropping in various places along a strike length of over 10km.

Rox has been successful at defining mineralisation at a number of prospects in the Pha Luang project, with over 9,000 metres of drilling conducted so far. A number of very strong drill targets, and extensions to known mineralisation remain untested. Rox is now among several Australian mining companies enjoying success in Laos where the Government has stated its intentions to embrace mining as a priority industry.

Rox is accustomed to, and comfortable with operating in Laos, and maintains a fully staffed exploration office in the Lao capital, Vientiane, to support the Pha Luang project.

Rox has an option to joint venture a large 2,600km<sup>2</sup> holding of ground on the **Lennard Shelf** in Western Australia. The Lennard Shelf is a known MVT province with past production, and has a mineral resource endowment of about 40 million tonnes at about 10% zinc equivalent grade. There is an extensive exploration and research database that Rox plans to use to efficiently and effectively explore the area, building upon its MVT expertise as manager of the proposed JV.

The **Reward** project in the Northern Territory covers 379km<sup>2</sup>, and is Rox’s first SEDEX project. There is potential at the Myrtle prospect for a McArthur River style deposit to be delineated, where thick drill intercepts of prospective stratigraphy carrying significant zinc-lead grades have already been made. TEM surveying, soil sampling and geologic interpretation indicates the potential for shallow near surface mineralisation. Other prospects in the tenement area are at an early stage.

Rox continues to actively review potential new opportunities, particularly zinc-lead projects in Australia and South East Asia.
