

ASX/MEDIA RELEASE

22 August 2008

WITHDRAWAL FROM LENNARD SHELF JOINT VENTURE

Rox Resources Limited (ASX: RXL) ("Rox") advises that it has reached agreement with Avalon Minerals Ltd ("Avalon") to withdraw from the Lennard Shelf joint venture.

Rox had entered into an agreement with Avalon in September 2007 to earn up to a 60% interest in early stage exploration tenements over a large area on the Lennard Shelf in the West Kimberley region of Western Australia.

Due to the current low zinc prices and difficulties accessing the area for exploration, both companies have reached agreement to terminate the joint venture.

About Rox Resources

Rox Resources (ASX: RXL) is an emerging Australian exploration company focussing on zinc-lead deposits, particularly deposits of the Mississippi Valley Type (MVT) and Sedimentary Exhalative Type (SEDEX).

Rox has an option to purchase the Reward project tenement which covers 379km² in the Northern Territory. There is potential at the Myrtle prospect for a McArthur River (SEDEX) style deposit to be delineated, and thick drill intercepts of prospective stratigraphy carrying significant zinc-lead grades have already been made. Drilling at Myrtle has intersected mineralisation above a 5% Zn + Pb lower cut-off exceeding several metres in total thickness over an east-west extent of 1,000 metres and north-south extent of 800 metres, and a large mineralised system is indicated.

IP and EM geophysical surveying, soil sampling and geologic interpretation also indicate the potential for shallow near surface mineralisation. Other prospects in the tenement area are at an early stage of exploration.

Rox also owns a 60% interest in the Pha Luang zinc-lead sulphide project in Laos which it believes has the potential to become a large new zinc-lead district. The project area covers a 20km² granted mining concession area and contains numerous MVT zinc-lead prospects. Rox is the first explorer to apply modern techniques to the area. Mineralisation is widespread with zinc and lead oxides and sulphides outcropping in various places along a strike length of over 10km. Applications have been lodged for an additional 290km² exploration area immediately surrounding the granted mining concession.

Rox has been successful at defining mineralisation at a number of prospects in the Pha Luang project, with over 9,000 metres of drilling conducted so far. A number of very strong drill targets, and extensions to known mineralisation remain untested. Rox is now among several Australian mining companies enjoying success in Laos where the Government has stated its intentions to embrace mining as a priority industry. Rox maintains an exploration office in the Lao capital, Vientiane, to support the Pha Luang project.

Rox continues to actively review potential new opportunities, particularly zinc-lead projects in Australia and South East Asia.

The information in this report that relates to Exploration Results and Mineral Resources is based on information compiled by Mr Ian Mulholland BSc (Hons), MSc, FAusIMM, FAIG, FSEG, MAICD, who is a Fellow of The Australasian Institute of Mining and Metallurgy and a Fellow of the Australian Institute of Geoscientists. Mr Mulholland has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration, and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Mulholland is a full time employee of the Company and consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
